

"Herrington and Bluetooth Charge to Impressive 2nd at Sebring"

March 20, 2006

Daniel Herrington (19) charged to an impressive 2nd place finish at the first race of the 2006 Star Mazda championship at Sebring International Raceway this weekend with AIM Autosport and Bluetooth support.

Quick all weekend, Herrington was regularly in the top 3 before getting caught out in a crash-filled first qualifying session, which resulted in him starting in 10th. However, the rookie Mazda driver quickly carved his way back to the front in the Bluetooth car, having a race long battle to challenge eventual winner Gerardo Bonilla.

Herrington states, "What a great start to the 2006 season. We were challenging for top spot all weekend, and a 2nd place proves that we have the speed to challenge for the championship, and we now have a lot of points towards that goal. I can't wait to get to the next race of the year."

Herrington used a Bluetooth enabled wireless headset in his car during the week. "The Bluetooth device worked flawlessly in its debut outing," says Herrington. "The fact that our first version of a Bluetooth wireless headset worked at one of the roughest race tracks in North America says a lot about the reliability of Bluetooth technology. I am excited to see how the device develops over the year!"

The first year engineering student returns to the NC State campus, where he can focus on his studies with the long break before race 2 of the Mazda championship in Houston Texas on May 14th.
