Phenom Racing Group Begins Testing for 2007 Championship.

Maryeve Dufault completes test at Buttonwillow Raceway Park

Monday, December 4, 2006. Benicia, California. Phenom Racing Group has begun testing in earnest for the 2007 Star Mazda Championship presented by Goodyear, recently completing a test at Buttonwillow Raceway Park with Montreal, Canada resident Maryeve Dufault.

Dufault, a former Miss Hawaiian Tropic International, has participated in a limited racing schedule the past two seasons, competing in the Canadian Grand Prix round of the 2005 Star Mazda Championship and select Formula BMW USA events in 2006. With this limited seat time, Dufault was happy to get some off-season testing under her belt in the #92 Phenom Racing Group Molecule Mazda.

"It was a pleasure testing with Phenom Racing Group and I'm impressed with the professionalism of the organization," Dufault commented. "When I've raced in the past I've had makeshift seats that haven't fit quite right, but Phenom built a seat just for me and really took the time to get me fitted to the car properly, which helped throughout the test as I could feel what the car was doing. The coaching they provided during the test allowed me to continue to build up speed and I look forward to working with them again."

Phenom Racing Group team manager Pete Mercier offered praise to Dufault. "Maryeve did an excellent job during the test for a driver with limited driving time," Mercier explained. "She responded well to the coaching and was able to improve throughout the day."

Team Principal Michael Guasch is also optimistic for the upcoming season. "2006 marked the debut of Phenom Racing Group and the team fared well in the ultra-competitive Star Mazda Championship with team driver John Faulkner just missing out on the Masters Championship," Guasch explained. "Now with a full season behind us, and the team established, we can spend this off-season making the cars and drivers even faster."

About Phenom Racing Group

Founded by Star Mazda Championship competitor Michael Guasch and veteran Formula Atlantic, American LeMans Series and Star Mazda engineer Pete Mercier, Phenom Racing Group is headquartered in Benicia, California and competed in the 2006 Russell Racing Pro Formula Mazda Championship as well as the nationally televised Star Mazda Championship presented by Goodyear. More information about the team can be found on their website at www.phenomracinggroup.com.

About Molecule

Racing suits made from Nomex® technical fabric have extraordinary properties to protect drivers from flames and heat. Care instructions published by Nomex® manufacturer DuPont™ state that this unique fabric requires special care to be fully effective. DuPont's laundering guide cautions Nomex® users that the fabric must be kept clean. "Flame resistance can be compromised by the presence of flammable contaminants on the garment..." the guide explains.

However, DuPont™ advises against using ordinary soaps for removing these contaminants. "Soap scums may be flammable and could adversely affect the thermal protective performance of the garment," DuPont's care guide warns.

Further, laboratory testing and analysis demonstrate conclusively that untreated Nomex® fabric will absorb flammable contaminants, creating a significantly higher risk of injury.

Formulated specifically for the critical requirements of Nomex® racing suits, Molecule products clean and treat Nomex® fabric in standard washing machines to remove the unique oils, fuel, and soils that are often encountered in the racing environment.
