Goshen Motorsports and Otto Environmental Systems, Inc. extend Sponsorship for 2009 Star Mazda Championship Presented by Goodyear

[Printer-friendly version](#)

Placentia, CA (March 17, 2009) - Goshen Motorsports and Otto Environmental Systems North America, Inc. (Otto), announced an agreement to renew their partnership for a second consecutive year. In the 2009 season, Goshen Motorsports will expand its race program to a 3 car team in the Star Mazda Championship presented by Goodyear, and their initial entry in the ASA Speed Truck Series. As in 2008, the Otto logo will be prominently displayed on the #82 car of Billy Goshen, and added to the #80 car of Toshihiro Deki and the #83 car of Ryan Booth. In his rookie season, 15 year old Joshua Goshen will also be promoting Otto Environmental Systems by carrying their logo on his #04 ASA Speed Truck.

Bill Goshen Jr., Owner, "All of us at Goshen Motorsports are excited to have Otto Environmental Systems, Inc., as our Premier sponsor for the 2009 campaign. We are looking forward to competing at the highest level, and providing Otto and their guests a memorable weekend at our racing venues throughout North America."

Otto CEO, Steve Stradtman, proclaims, "We continue to work with the Goshen Team to offer a value-added service and entertainment program for our employees and customers. Watching the young drivers advance their expertise and professionalism is similar to what we at Otto have been doing over the past several years. We are looking forward to sharing this experience with others."

Otto is a manufacturer and service provider of plastic containers for the waste, material handling and industrial markets. Otto offers unique plastic and steel hybrid dumpsters that reduce maintenance costs through eliminating the necessity to paint the container or the need to replace the bottom during its lifetime. Also, there is a savings in time and a reduction in labor cost for container swap-outs since the containers last longer in the field, compared to steel containers.

Otto also produces residential refuse and recycling carts and bins for municipalities and trash haulers. A market leader in providing residential containers in the U.S., Otto has expanded its residential line with products that accommodate the advancing technology in waste collection, including single stream recycling.

Otto's Container Management division offers services to collect and recycle old carts and bins from customers, so that the containers are not landfilled. This Reclaim Program has resulted in approximately 200,000 old trash carts being recycled in 2008. Otto Container Management (OCM) also provides cart logistics services such as replacing, removing, delivering and moving carts from one location to another, including residences and hauler yards. OCM can provide work-order emergency services to haulers that have fallen behind on residential cart repairs, getting the hauler caught up, and raising the service level to their customers.

Otto is the U.S. division of Otto Group BV. A privately held European-based company specializing in waste collection products and services, Otto Group was founded in 1934 and has ten manufacturing locations across the globe. The Otto Group operates in Europe, the U.S., Central America, South America, South
